CRV1 Curved Ramp Flat Edge for Straight Structures and WCA Wall Cove Ramp

Featured Product
Evoq Fixture

Declare

Evoq The Fixture

Evoq fixtures are powerful, emitting up to 1200 lm/ft with a range from 3W to 12W. With integrated drivers, they maximize performance without compromising aesthetics. With two optic options available—the Asymmetric Narrow Optic (ANO) or Asymmetric Wide Optic (AWO)—Evoq fixtures offer a variety of mountings, including Mud-In, Direct Mount, or Field-Curvable ramp profiles, ensuring compatibility with any architectural cove design. Additionally, they can be used in pre-existing coves as standalone luminaires or installed with adjustable mounting brackets and rails.

Design & Options

The Fixture

Evoq luminaires are compact and versatile, seamlessly integrating into deep or shallow coves with plug-and-play 12", 18", and 48" fixtures. They excel in providing soft, even illumination for both shallow and deep cove applications. Fixtures can be spaced up to 0.5" without creating socket shadows or dark spots on the ceiling or walls.

Their quick, cost-effective installation with 12+ ramp options, along with adjustable options, makes them ideal for any cove application. Evoq fixtures are offered with multiple control options and provides smooth dimming up to 0.1%.

CRV2: Curved Ramp Flat Edg, Curved Structures

Evoq Optics

Evoq utilizes true asymmetric optics engineered to precisely control horizontal and vertical distribution, delivering clean beams with no light spill, strong visual comfort, and ample illumination on the work plane. These optics provide excellent color-over-angle uniformity with a smooth, striation-free distribution—well suited to applications requiring targeted, directional control.

Evoq also offers symmetric optics—the Symmetric Narrow Optic (SNO) and Symmetric Wide Optic (SWO)—to support indirect lighting applications. Unlike asymmetric distributions, SNO and SWO are designed around a balanced 1:1 relationship between the fixture-to-ceiling distance and the fixture-to-opposite-wall distance. This proportional geometry supports controlled ceiling illumination while limiting spill onto the opposite wall, resulting in a quieter, more contained indirect lighting effect.

True Narrow and Wide Asymmetric and Symmetric Optics

Impressive Ceiling Uniformity

Precision-Engineered Optic Design

No Shadows
No Dark Spots

Asymmetric Narrow Optic

ANO

Our Asymmetric Narrow Optic (ANO) is designed specifically for shallow coves with optimal performance achieved with fixture placement at 6"-12" from the ceiling. Its precise projection of light along ceilings and walls is evenly distributed with a soft, homogeneous gradient effect. The ANO peak intensity angle from nadir is at 110°, making it a true asymmetric optic that directs the light where it is intended.

Asymmetric Wide Optic

AWO

The Asymmetric Wide Optic (AWO) excels at maximizing light projection even farther to create a soft gradient illumination with remarkable uniformity in deeper coves. The AWO's optimal performance is achieved with fixture placement at 10"-36" from the ceiling. Its peak intensity angle from nadir is at 107°, creating a true asymmetric optic that aims light exactly where needed.

FEVI: Flat Edge

Symmetric Narrow Optic

Engineered for pure indirect performance, the Symmetric Narrow Optic (SNO) delivers a 98° beam that blankets ceilings in uniform, comfortable light. Refined through a precision de-glare low profile optic, it can produce luminous ceilings with virtually zero glare.

IDEAL FOR: General ambience from concealed coves or narrow corridors where you want brighter ceiling planes with less spill to walls.

SNO

Symmetric Wide Optic

Designed for flawless indirect illumination, the Symmetric Wide Optic (SWO) delivers a remarkably broad 145° beam that floods ceilings with soft, even light. Powered by a precision acrylic optic with laser-etched diffusion, it emits over 96% of its lumens upward, creating luminous ceilings free from glare or harsh contrast.

IDEAL FOR: Concealed coves, floating ceilings, and perimeter applications where smooth, comfortable indirect light defines the space.

Color Temperatures & Static Colors

Evoq offers a versatile range of standard color temperatures, spanning from 2700K to 4000K. This range ensures that our lighting solutions cater to various environments and moods, providing options suitable for cozy warm spaces, at 2200K to crisp, clear lighting at 5000K. Evoq provides the flexibility of custom color temperatures or static colors, allowing you to precisely tailor the cove lighting to your space. Moreover, Evoq has optimal color consistency with 2-Step white binning.

Evoq Mountings

Evoq ramps serve as prebuilt cove structures that can be easily integrated into ceilings or walls. All ramp options are field-cutable and meticulously fit various designs of all shapes and patterns - straight, curved, or linear. They come in Mud-in, Direct Mount, or Field-Curvable options and they ensure quick and cost-effective cove installation. Evoq can also be integrated into existing coves as standalone fixtures.

Mud-in Ramps

8 RAMP OPTIONS

Evoq Mud-in ramps seamlessly integrate cove lighting into ceilings or walls they serve as prebuilt cove structures. The ramp profiles are plastered-in and painted for a clean, polished ceiling appearance. The ramps are field-cuttable to ensure a perfect fit.

RAMP PROFILES

- **FE1** Flat Edge
- **FE2** Flat Edge with Air Return
- **KE1** Knife Edge 35°
- **WCA** Wall Cove with Adjustable Brackets
- **CKE1** Curved Ramp With Knife Edge for Straight Structures
- **CKE2** Curved Ramp With Knife Edge for Curved Structures
- **CRV1** Curved Ramp Flat Edge: Straight Structures
- **CRV2** Curved Ramp Flat Edge: Curved Structures

Field-Curvable Ramps

2 RAMP OPTIONS (MUD-IN)

The Field-Curvable ramps are the most flexible and customizable mud-in mounting options within the Evoq family. They are adjustable on-site to match the curved or straight contours of the wall/ceiling structure. The FC1 ramp includes field-curvable corner sections and non-field-curvable straight sections. The FC2 ramp option comes in 6' sections and is fully field-curvable for curved or straight structures. Both options are field-cuttable and require plastering and painting.

RAMP PROFILES

- **FC1** Field-Curvable Corners with Non-Field-Curvable Sections
- **FC2** Field-Curvable Ramp

Direct Mount Ramps

3 RAMP OPTIONS

Evoq Direct Mount ramp options provide hassle-free, cost-effective cove lighting installations with prebuilt profiles that serve as stunning architectural cove details. The ramps are field-cuttable to ensure a perfect fit. Their streamlined finish elevates spaces and create a clean ceiling aesthetic.

RAMP PROFILES

- **DM1** Flat Edge
- **DM2** Flat Edge with Gasketed Clear Cover
- **DM3** Flat Edge with Adjustable Brackets

Additional Options

(COVE BY OTHERS)

Evoq can be integrated into existing coves as standalone fixtures or using the Adjustable Brackets with Mounting Rail option (ADJ).

OPTIONS

- **EVOQ** Evoq Fixture
- **ADJ** Adjustable Brackets with Mounting Rail

Mud-in Ramp Options

Evoq mud-in ramps serve as prebuilt cove structures that can be easily integrated into ceilings or walls. The ramps are field-cutable to ensure a perfect fit and for a non-visible cove detail that blends seamlessly into the space, the final step is to plaster and paint the exposed part of the ramp. This creates a polished, built-in finish that blends into ceilings and walls.

FE2 Ramp Option Concealed Air Return

Evoq's air return FE2 ramp solution eliminates the need for creating ventilation opening, saving on installation costs and effort.

The FE2 ramp effectively integrates air circulation into the cove ramp profile, concealing the air returns opening while delivering smooth, evenly distributed light. The ramp profile is a flat edge and is designed to be mud-in, and painted on site. The cove detail and air return disappear in the architecture resulting in a clean ceiling.

Wall Cove Ramp (with Adjustable Brackets)

WCA

- Wall Cove with Adjustable Brackets

WCA is included in the mud-in offering, designed to be field-cuttable, plastered-in, and painted. The ramp is factory-built and creates a cove space allowing for straight patterns with factory preset illuminated corners. Its adjustable feature simplifies directing light towards your wall at the desired angle, without any pixelation on the surfaces. For optimal illumination, the ideal minimal distance from the wall is 6" for the Asymmetric Narrow Optic (ANO) and 12" for the Asymmetric Wide Optic (AWO).
